Akanksha Sharan Basappa Raghapur

(669) 340-6764 | akanksha.sharan09@gmail.com | LinkedIn | GitHub

Education

San Jose State University, San Jose, CA — GPA: 3.7/4.0
Master of Science, Computer Science — *Expected Graduation: May 2026*
Coursework: Advanced Algorithms **(top 1%)**, Machine Learning, Cloud Computing, Big Data using ML, InfoSec

SRM Institute of Science and Technology, Chennai, India — GPA: 3.5/4.0
Bachelor of Technology, Computer Science and Engineering — *July 2018 – May 2022*
Coursework: Data Structures and Algorithms, Artificial Intelligence, Operating Systems, Computer Networks

Experience

Software Engineer — Sept. 2022 – July 2024
Ernst and Young (EY) — *Chennai, India*

- Developed RESTful APIs in **Java** and **Spring Boot** to enable real-time policy update notifications via **Apache Kafka**, processing **50K+** messages/month in a large-scale insurance system.
- Designed and implemented rule-based business logic, dynamic UI behaviors, and automated workflows using Gosu (**JVM-based**), streamlining user interactions and reducing manual task overhead.
- Built event-driven Java plugins using **JDBC** and **Hibernate ORM** to sync policy changes to **MySQL** in real time, enabling reporting on migrated **Oracle** data.
- Boosted application performance by optimizing SQL queries, implementing **Redis caching**, and using asynchronous processing, achieving **25% faster response** times.
- Engineered custom Java batch jobs using ExecutorService to parallelize data migration, **boosting throughput by 60%** on high-volume policy operations.
- Developed internal message queuing systems using Java concurrency and **Jackson JSON** to enable efficient parallel processing and external service integration.
- Automated data synchronization by combining scheduled jobs with **Quartz Scheduler** and DB triggers, enabling reliable nightly syncs and near real-time updates across systems.
- Built and maintained **50+** cross-platform test cases using **Selenium** and **Appium**, improving test coverage and accelerating sprint-level regression by **3+** days.
- Received a **recognition** award from Consulting leadership for technical contributions, along with multiple **Spot Awards** for project-level impact.

Research Intern — Jan 2021 – May 2021
IIT Madras — *Chennai, India*

- Contributed to the development of a **Python**-based Automated Assembly Program Generator (AAPG), a RISC-V test generator, **reducing regression runtime by 30%** by resolving performance bottlenecks in instruction generation.
- Maintained nightly CI runs using **GitLab** in a Linux environment, reducing regression failures and ensuring test stability.

Projects

JobMatch AI – AI-Powered Resume Matching Chrome Extension | *Node.js, Express, Groq/Mixtral, Pinecone*

- Engineered a low-latency Chrome extension that semantically compares LinkedIn job descriptions to user resumes using **MiniLM embeddings + Pinecone** search, surfacing missing skills in under 300ms.
- Integrated **AI-powered role-specific** suggestions via Groq-hosted Mixtral and prompt engineering.
- Designed a Simplify-style UI for instant, in-browser visualization of skill gaps and match scores.

Technical Skills

Languages: Java, Python, C++, JavaScript, TypeScript, HTML/CSS
Tools and Frameworks: Spring Boot, Hibernate, Node.js, Apache Spark
Testing/CI/CD: Selenium, Appium, Cypress, GitHub Actions, GitLab CI
Database: PostgreSQL, MySQL, MongoDB, HBase, Hive
DevOps and Cloud Platforms: AWS, Azure, Docker, Kubernetes, Jenkins
